

StudyTrace Mock Data

This folder contains five synthetic datasets for testing StudyTrace upload classification, evidence cards, academic-process timelines, explanatory risk analysis, and report export variants.

All names, courses, schools, policies, citations, emails, and writing samples are fictional. The files are intentionally named with signals such as final, draft, version-history, zotero, chatgpt, policy, assignment, turnitin, misconduct, and appeal so the local classifier and AI ingest can be tested.

Suggested test order:

1. `01-complete-low-risk`: strong and complete process evidence. 2. `02-good-minor-gaps`: mostly complete, with minor citation and timestamp gaps. 3. `03-ai-use-needs-explanation`: clear writing process but AI-use evidence needs explanation. 4. `04-citation-integrity-risk`: citation authenticity and format issues. 5. `05-weak-incomplete-high-risk`: weak, incomplete, and high-risk appeal package.

Recommended workflow:

1. Upload all files in one group. 2. Check whether StudyTrace groups them as Paper, Citation evidence, Writing process, AI-use record, School material, and Appeal material. 3. Review generated evidence cards. 4. Open the academic-process timeline. 5. Generate risk explanation. 6. Export all three report versions.
